Build a playlist

A playlist rotates several layouts on one screen — so one display does more.

1. **Open a display → Content source → Playlist tab → Manage.**

2. **Click + New, name it, and Create.** Now you've got an empty playlist to fill.

3. **Add a layout, set how many seconds it shows, click Add.** Repeat for each.

4. **Drag to set the order.** They play top to bottom, then loop.

5. **Click Done.** Your screen starts rotating right away.

✓ **One screen, many messages** — on repeat, all day.
