BrandCast

DIGITAL SIGNAGE FOR COMMUNITY SPACES

Everything happening here, on one screen.

One screen by the door, run from your phone, doing the job of the whiteboard, the flyer table, and the sign-up clipboard.

A community space runs on information that changes every week. One BrandCast screen carries it and switches jobs through the day, so the glass shows what matters right now. You change it from your phone.

ONE SCREEN, MORE THAN ONE JOB

The same screen greets people on the way in, then holds them while they wait.

01 Welcome

"What's going on here today?"

GOAL Today's schedule, and the one date nobody should miss.

04 Engage

"Tell me more while I wait."

GOAL Program spotlights, photos from last session, and what to sign up for next.

WHAT GOES ON THE GLASS

The Calendar You Keep

Google Calendar, Outlook and Apple Calendar all publish a share link. Paste it in once. Events appear on the screen, then clear off after they pass.

Countdowns

Days left until registration closes, the recital, the gala. A number on the wall lands differently than a date in a newsletter.

Slides You Already Made

Send a Google Slides deck or a PowerPoint straight to the screen. Pull photos in from Google Photos, Apple Photos, or Canva.

Also on the list: rotating announcements, clock and local weather, and FEMA emergency alerts. Twig, our AI, drafts the slide in your words. You approve it from your phone, then it goes live.

Put a QR code on the screen.
Your donation page. Registration for Saturday. The volunteer form. Someone reads the screen, lifts their phone, and they're on it before they've sat down.

Try it out for free.

One screen, free for as long as you want it, no credit card. It runs in a browser, so there's no hardware to buy. Free screens carry a small "Made with BrandCast" badge. Scan to set yours up.
